Social Plains Picnic

Attracts Record Crowd

The big Social Plains Picnic of 1920 has now passed and is relegated into picnic history. The day was a splendid one for such an event. The heavy rain and storm of Wednesday night had broken the spell of excessive heat. Fields of grain and man and beast all felt refreshed. Early in the morning the cars commenced to leave our town for the picnic, and towards the noon hour practically every business place had closed its doors.

The ride to Social Plains was an enjoyable one, although those driving autos were called upon to skirt numerous mud-holes enroute. Arriving on the scene one found a large number of cars parked outside the field in which the sports were taking place and around which a page-wire fence had been erected. During the afternoon, a count of these cars being made, it was found that the number exceeded two hundred. In addition, there were a large number of people present who had made the journey by horse and rig and whatever form of conveyance they could secure. A fair estimate of the crowd is placed somewhere in the neighborhood of fifteen hundred people.

The Medicine Hat brass band were ensconced in a large hay-rack, which decorated with the boughs of trees made an excellent band stand. They were none too generous with their music, although their renderings of popular airs helped along the proceedings.

In the forenoon a splendid game of baseball was witnessed between Empress and Cavendish, the result being 9-3 in favor of Empress. The afternoon was given over to the various horse and foot races. In the Relay Horse Race an unfortunate accident occurred, Oliver McKay, being thrown from his horse and suffering a broken arm. The looking contest elicited the

usual large share of interest. The baseball game between Vandyne and Mayfield was productive of much rooting from the supporters of the opposing teams. The game was called early owing to poor light, with the score 11-10 in favor of Mayfield. A large number attended the dance, which was finally concluded about 4 o'clock the following morning.

A cause of disappointment was the non-appearance of the flying machine, and although there were many rumours as to its appearance later in the day, such did not happen. However, we understand the Social Plains sports committee were in no wise to blame, and they were probably more disappointed than any of their visitors at being without one of their chief attractions.

Books were distributed among ribbon purchasers. These contained history previous to and since the settlement of the district by its present settlers. The books contained many illustrations, and the text matter was interesting to pioneers.

The picnic involved a lot of work, and the committee are entitled to every praise for the success achieved.

Proposal To Build Creamery

F. G. Umphreys, representative of the Saskatchewan Creamery Co., is in town this week in connection with the purpose of the Company for the erection of a Creamery here. For the discussion of this proposal a meeting of farmers and business men is being called on Monday evening at 8 p.m. The meeting will take place in the Engelbrecht building, under the auspices of the Board of Trade. The Company is endeavoring to place \$25,000 worth of gold bonds bearing interest at 7 p.c. payable bi-yearly. These bonds will be sold 25 p.c. cash on application, with balance payable in equal amounts, November 1st, 1920, April 1st, 1921 and November 1st, 1921. The Com-

pany are also issuing Second Preference Stock, bearing 5 p.c. interest, cumulative, non-voting; 10 p.c. cash on application, with balance in equal payments over same period as gold bonds.

The security offered for the gold bonds is in the form of mortgage on the Company's several properties. Respecting the success of their plans, the Company state that wherever they have built a Creamery it has paid its way from the very first.

The necessary consent work in the necessary consent work this fall and to proceed with the erection of the building next spring, that the creamery might be in operation next year.

The "Count on Me" Sunday School class are holding a concert on August 6.

Farmer's Column

BINDLOSS

Crops in the Bindloss district
are prospering so that cutting
may start the beginning of
next week.

A party gathered at Mr.
Frank Lydman's for a musical
rehearsal. Messrs Jack McNeil
and "Sherry" De Groat were
present. This with regard to
the garden party to be given at
Mr. J. Barnes' next Friday.

Mr. Frank Lydman bought a
team from Mr. Inaley. Some-
thing doing now!

Messrs. Fred Strom, Nick
Delaney, Westberg and V. H.
Feldberg returned from the
far north, and as far as learned,
they have each bought a half
section of land from the C.P.
R. They intend to go into
mixed farming.

We are told that Mr. H.
Crozier has traded quarters
with Eug. Fitzer, the latter
giving his town quarters in ex-
change for the farm of the first.

Summer - fallowing is at
an end. Several farmers have
quite a few acres under cultiva-
tion and may expect a good
crop next year.

ATLEE

Haying will be in full blast in
the next few days. Feed will
be plentiful for all stock this
winter.

Miss Daisy Read crossed the
Red Deer river on Sunday,
and she has taken a position

as housekeeper.

C. E. Hovey began harvesting
rye last Wednesday. Leo
Howard is doing the cutting for
him.

The U.F.W.A. met at the
home of Mrs. W. F. Lawler. We
ordered a few books from the
Extension Library, Edmonton,
on Public Health, and held a
discussion which was interest-
ing.

H. W. Dunn returned from a
business trip to Calgary, last
Monday.

The work at the Atlee Ferry
has been completed. About
five men were busy for four or
five days.

R. Ripley is entertaining
three of his sisters from the
west. They are school teachers
and have come to enjoy the
Sunny Climate of Alberta.

Mr. and Mrs. Fred Nelson re-
turned from a trip to Spokane,
where they have been visiting
Paul's mother. They also at-
tended the Calgary ride.

Quite a number of young
people from Atlee attended the
picnic at Social Plains on the
23rd. Too bad more locals did
not take the trouble to have
such rousing picnics as Social
Plains produces.

R. M. of Mantario

Minutes of meeting held at
Orange Hall, July 17th.—

Rowles—That a full council
being present, we now resolve
into a meeting for the purpose
of dealing with general busi-
ness.

Walker—That the estimates
of Clifton Bank and Langhain
School Districts be passed, and
cheques issued for balance due
to each at 2nd quarter.

Rowles—That a further
grant of \$2.00 per day be
made to the Qu'Appelle Sanatorium
in respect of Mrs. A. J.
McCarthy, until the 1st of
September.

The following accounts were
passed for payment by the
finance committee.

Empress Express	12.00
G. F. Smith, Roads	50.00
Groat, Repairs	5.00

making a total of \$73.00.

Rowles—That an additional
appropriation of \$2000 be made
for the purpose of road work
\$1000, as per assessment, and
\$1000, equally, among the six

divisions.
McWhinney—Amendment,
—That the amount be 3000.00
1500.00 as per assessment, and
1500.00 equally among the six
divisions.

After some objection by
Cus. Walker and Rowles, the
amendment was finally carried
unanimously.

Walker—That the rate for
Municipal purpose be struck at
8 mills for the current year.

McWhinney—That W. H.
Bachelier be paid \$100 on ac-
count of contract.

Rowles—That this meeting
now adjourn to meet again at
the usual time and place on
Saturday, August 7, at 10 a. m.

A proposal to form a co-
operative farmers' pool to take the
place of Canadian wheat board
in handling the 1920 crop is to
be debated by executive commit-
tee of the United Grain Growers
Association. The idea suggest-
ed by the directors of the United

Farmers of Alberta, has been
received with favor in some
quarters here. The proposal is
an outgrowth of the Grain
Growers' dissatisfaction over
the federal governments de-
cision to discontinue wheat
control.—Ex.

MUNICIPAL ELECTIONS 1920

PUBLIC NOTICE is hereby
given that a meeting of the
electors of this village will be
held at Municipal Office
Empress, Alta., on Monday, the
second day of August, 1920,
from eight o'clock p. m. to ten
o'clock p. m. of the said day for
the purpose of nominating
candidates for the election to
fill vacancy caused by resigna-
tion of Councillor McEachern
for the ensuing year.

Dated under my hand &
Empress, Alberta this Twenty-
fourth day of July, 1920.

The Store of 'Much-Better' Service **JOHN I. STOUT**

Meets Death in Red Deer

This fishing of Wayne, lost his life on Sunday afternoon. On Monday a party of citizens, while on a trip to the Red Deer in that locality made a search for the body but without success. A brother, Nils Disinger, resides 6 miles east of the river when Disinger started to swim across. After he reached Wayne.—Mail, Drumheller.

the middle of the stream he was heard to shout for help and immediately went down and was not seen afterwards.

On Monday a party of citizens, while on a trip to the Red Deer in that locality made a search for the body but without success. A brother, Nils Disinger, resides 6 miles east of the river when Disinger started to swim across. After he reached Wayne.—Mail, Drumheller.

One of the most spectacular baseball games that the people of this district ever witnessed was played on July 23, at the Social Plains picnic, the opposing teams being the Cavendish Giants vs. Empress Bearcats. Although Cavendish team played air tight ball all through the game, it seemed to be an uphill fight for them after the fourth innings, the score then being 5 to 3 in favor of Empress. It was then that the Empress battery tightened up and completely shut out Cavendish from making another run in the last five innings, the score when finished stood 9 to 3 in favor of Empress.

The main features of the game were two second base hits in succession by Best and Pullin, and a home run drive by Borthwick.

Both managers are to be complimented on the manner they handled their teams, as there was absolutely no fault finding or "beefing" on either side. Although Cavendish was beaten, all their players expressed a desire to get at Manager Arthur's team in the near future.

G. Tucker who umpired the game gave satisfaction to all and both sides complimented

him on his fair and unbiased decisions.

A CHALLENGE

The "Has Beens" of "Might have Beens", in other words the "Dads", will play a series of best two out of three games of baseball with their sons.

Now boys get your line up in next week's paper, stating time and place for game. Remember, boys playing who do not bring their Dads with them to play against them give the Dads the privilege of choosing players providing they have a son.

Mothers are requested to be at the game to see fair play.

Will the following fathers hold themselves in readiness to play: Robertson, Dawdy, Fybus, Galloway, Arthur, Hanna, Richards, Peters, McLean, Boswell, Frost, Watt, Henderson, MacCharles, Gregg, Storey, Stewart and Young.

Yours a "Might have Been"

E. J. Conn, returned from Calgary, Wednesday.

Buffalo Celebrates August 6

Friday, August 6, 1920, is to be a red letter day in the history of Buffalo, and those who journey there on that date are going to have a very enjoyable picnic day if the ladies of the Buffalo Women's Institute succeed in their present intentions. And succeed they will. They have an original program planned, and although this is their first attempt to place their district on the map we are looking forward to hearing some pleasing remarks concerning this picnic.

As will be seen from the advertised program the sports are large in their scope. The baseball fan, the wrestling fan, the boxing fan and, last but not least, the basket ball fan is to be catered to. As stated before, this picnic is under the management of the ladies and crops are good in Buffalo district, so that it is a safe bet that everybody in Buffalo will be exercising their best endeavors to make the day a real worth while one.

Comment on Current Events

The last week of June and the first few days of July were prolific in important changes in the political life of Canada, and in some respects were but indicative of the unsettled state of politics generally throughout this and other countries. Union Government, which was brought into being through the efforts of Sir Robert Borden as a war administration late in 1917, having fulfilled its destiny, has passed away. Sir Robert Borden has laid down the responsibilities of the premiership, and these have been placed on the younger shoulders of Hon. Arthur Meighen, who is not only the present premier Canada ever had, but also the first man from west of the Great Lakes to achieve that high office. His Government will be representative of the political organization which supercedes the Conservative and Unionist parties in Federal politics and which has been named the National Liberal and Conservative Party. In addition to Sir Robert Borden, Hon. N. W. Martin, Hon. J. H. Macdonald, and Hon. Martin Burrell retire from the Government; consequently the first test of the strength of the new administration with the public will come with the election of the new ministers to be chosen.

A second change of moment was the resignation of Sir John Gwynne from the premiership of Quebec, an office he has held for the past fifteen years, and a longer period than any of his predecessors. Sir John's retirement does not mean any marked change in the Quebec Government. He has been a life-long life to engage in the activities of business, commerce and finance, and is succeeded in the premiership of Quebec by one of his former cabinet colleagues, Mr. Taschereau.

Even more significant of prevailing public opinion in Canada today was the result of the Manitoba Provincial elections which has created in the oldest of the prairie provinces a situation somewhat similar to that existing in Ontario. Of the four largest groups in the next legislature—Liberal, Farmer, Conservative and Labor—only one commands a clear majority in the house. Followers of the Norris Government constitute the largest single group, with Labor second, Farmers third, and Conservatives fourth, with few independents in addition. The Norris Government will carry on with the support of certain of the Farmer and Independent members, while Labor will probably constitute the official opposition party.

The Manitoba elections were also noteworthy by reason of the fact that for the first time in Canada the system of Proportional Representation was applied in a Parliamentary election, the city of Winnipeg electing its ten representatives by that method. All parties were agreed that it was a marked success and of general satisfaction. With ten members to be elected out of a list of 41 candidates nominated by the various political parties, the new system was given the hardest test yet applied to it in any English-speaking country, and the successful outcome was a strong point to its early adoption throughout Canada.

As indicating that there has been little change in the war-time senti-

ment of people on the question of New Brunswick referendum is of interest. Two questions were submitted to the electorate: (1) Whether the prohibition laws should be retained, importation stopping and the bone-dry condition created, or (2) whether the sale of wines and beer should be permitted. By a vote of 10,000 to 2,000 the people declared against the sale of wines and liquor, and by a two-to-one vote emphatically recorded their preference for the prohibition of the traffic in alcoholic beverages for beverage purposes.

While the people of Canada have thus been engaged in their own political affairs, in the United States the Republican and Democratic parties have adopted their platforms for the presidential election next November and named their candidates. A clear-cut issue on the Peace Treaty and League of Nations is now presented to the American people, and the voters will themselves decide the issue, the Republicans bitterly condemning the acts of President Wilson at the Peace conference, and the Democrats upholding the League of Nations as necessary for the future preservation of the peace of the world. While not concerned in the essentially domestic politics of the United States, Canadians will follow with keen interest the struggle for and against acceptance by the United States of a place in the League of Nations as a co-partner with the other civilized peoples of the world in maintaining the highest international ideals.

Minard's Liniment Relieves Distemper.

Horses in Saskatchewan (Buffalo Express)

Saskatchewan is generally assailed in the midst of cold weather and wheat. It is surprising to learn, therefore, that it leads the Canadian provinces in horse population, there being a total of 1,095,000.

The Oldest Living Thing

Huge Cypress Tree Said To Be 3,000 Years Old

A huge cypress tree in a churchyard near Santa Maria del Tule, in Southern Mexico, according to scientists, is the oldest living thing in the world, being between 3,000 and 6,000 years old.

This age is based on the gigantic bole of the tree and the slow growth of the species. The figures mean that when the seed from which the tree sprang fell on the earth, the Mesozoic was holding the reign in Egypt of which we have a historic knowledge, 3,000 years before the birth of Christ.

Human history discloses the tree more than 100 years ago. He nailed to the tree a wooden tablet containing his autograph and, although it is now partly hidden by the subsequent growth, the autograph is still legible.

CONSTIPATED CHILDREN

Children who suffer from constipation, indigestion or any of the other ailments which attend the condition of the bowels will find prompt relief in the use of Baby's Own Tablets. The Tablets are a mild but thorough laxative which can always be relied upon to regulate the bowels and sweeten the stomach. Concerning them, Mrs. Thomas A. Bouton, Lake Baker, N.B., writes: "I am pleased to state that Baby's Own Tablets were of great help to me when my baby was suffering from constipation." The Tablets are sold by medicine dealers or by mail at 25 cents a box. Write to Dr. Williams Medicine Co., Brockville, Ont.

Overcoming the Earth

Estimated That In 170 Years From Now Maximum Population Will Be Reached.

According to the statistics, the population of the world cannot go on indefinitely at the present rate. It has been estimated that if it does, then we are near the end of our career. In 170 years from now the maximum population that the earth can support will be reached. The only country at the present time that is reasonably living within its assets of land is France, for to double her population requires 433 years. If the present rate of increase in the population of the world is maintained (supposing such a thing possible), then in 2,000 years from now the population would be twenty-five times greater than it is now.

F. Beddingfield Dead

Frank Beddingfield, from whom the Prince of Wales bought his Alberta ranch, is dead in England, according to a cable to Gov. Lane of the B. U. ranch.

Saw Possibilities In Experiment

Liverpool Dockmaster Evolved Principle of Modern Lightship Sometimes during the latter part of the eighteenth century a scientific person of London made a wager that he would read a newspaper by the light of a "floating dip" at a distance of 30 feet. To do this the scientist merely coated the inside of a shallow box with sloping pieces of looking glass so as to form a concave lens, put his farthing dip in the box and readily deciphered the small print at the stipulated distance. The experiment was witnessed by a Liverpool dockmaster. He was a thinking man and saw great possibilities in this learned jest. He straightaway adapted the principle to lighthouse requirements and forthwith with the modern reflected light with its mile of range and greatly multiplied life-saving powers sprang into being.

Don't Hawk, Blow, Sneeze, or Cough Use "Catarrhazone"

When germs attack the lining of the nose, make you sneeze and gag—when later you infect the bronchial tubes—chances are you follow them with a cough syrup. You can't do it—that's why Catarrhazone goes everywhere—gets right after the germs—kills them—breaks the chain of infection—makes Catarrh disappear. Not difficult for Catarrhazone to cure, because it contains the essence of pine balsams and other antiseptics. It is safe for all ages. Large size costs \$1.00 and smaller sizes 25c and 50c, all drug stores and druggists.

Pulp Mill For Port Arthur

Provincial Paper Mills Will Spend a Million and a Half on Undertaking.

Port Arthur will be the scene of important developments in paper manufacture when the plans are completed of the Provincial Paper Mills, Limited, Toronto, who have just been incorporated. About \$1,500,000 is estimated to be the amount to be spent in Port Arthur. The plant, which occupies 140 acres in the city, of Port Arthur, has turned out about \$2,000,000 of sulphite, which has been sold in the United States, chiefly in Wisconsin and Minnesota. It is now intended to complete the product in paper on this side, with a mill to paper out forty tons a day. With the expenditure of \$500,000 the mill absorbed by the new company, these productions will be increased.

Worms in children, if they are not attended to, cause convulsions, and often death. Mother Gray's Worm Expeller will protect the children from these distressing afflictions.

Indian Trophies for Museum

Considered the Highest Examples of Cree Art in Existence

Chief Paddy's saddle cloth, and a Cree's saddle have been bought by the provincial museum at Regina, by William Leach, of Moose Jaw, an old-timer in this province who brought the C.P.R. steel into Regina in 1882. These trophies are considered the highest examples of Cree art in existence, and it required two years of negotiation before Mr. Leach was able to secure possession of them. For the past couple of years they have been on display in San Francisco and will likely be exhibited at the provincial summer fair.

The saddle cloth was found in leaf form and seven with burnt skins. The work is highly artistic, and both pieces are worth a considerable sum of money.

Be a Self-Starter

Don't wait to be told what to do to succeed. Even if you have no routine machine, you're not a machine, but a human being with a regular brain full of valuable creative power.—N.Y.C. Times Magazine.

There is nothing repulsive in Miller's Worm Powders, and they are as pleasant to take as sugar, so that few children will refuse them. In some cases, however, these powders, through their action in an unobscured stomach, may cause vomiting, or their cleansing power, no indication that they are harmful. They are entirely harmless, and they are clean.

Panama hardwood forests abound in Panama.

Enormous Debt Of The Nations

Has Expanded Since Countries Reached High State of Civilization.

The combined national debt of the United States, Great Britain, France, Italy and Germany according to recent estimates by the Bankers Trust Company, of New York, approximates the vast sum of \$190,000,000. Germany leads the list with a debt of \$50,000,000. The others follow in this order: France \$46,000,000, Great Britain \$39,000,000, United States \$25,000,000, and Italy \$18,000,000. National debt is built up chiefly by warfare, yet paradoxically, as these countries have reached a higher state of civilization, their national debt has expanded enormously. A study of "English Public Finance," issued by the Bankers Trust Company, traces the origin of national debt. It shows that prior to 1688 the national debt as an institution, was unknown in England and probably elsewhere.

To Use the Red River

May Come Into Prominence as Transportation Route.

Efforts are to be renewed to bring back to the Red River and Manitoba something of the importance it held in the pioneer days as the main artery of commerce of the west. Fifty years ago the Red River was the link in the chain connecting the Manitoba settlers with the outside world. Immigrants poured into the west from the east and south, using the southern portion of the stream, while to the north, boats laden with the richest furs floated down the river on their way to Hudson Bay and thence to England. With the coming of the railways the Red lost its place in the transportation world. Today its tawny water floats only a fleet of pleasure boats and an odd scow bringing sand, gravel, or wood from the northland. Soaring freight rates, however, have revived interest in the Red River as an artery of commerce and the Winnipeg city and province have by no means abandoned the idea. A commission is planning extensive dredging and the creation of large docks at Winnipeg and St. Boniface. The discovery of gold and copper along Lake Winnipeg, the high prices now prevailing for wood and lumber, and the interest in the pulpwood fields of Northern Manitoba, are all combining to bring the Red River again into prominence as a transportation route.

One Great Essential To A Woman's Health Is Her Nerves

Nature intended women to be strong, healthy and happy as the day is long, instead of being sick and stretched. But how can a woman be healthy and happy when the whole nervous system is so utterly in trouble? It is they pay more attention to their social and household duties than they do to their health. Is it any wonder then that they become irritable, nervous, and lost? They are full of dizziness, everything and everything in life becomes dark and gloomy.

Miller's Heart and Nerve Pills are the very remedy that nervous, tired-out, weary women need to restore them to the blessings of good health.

Mrs. P. H. Ryan, Sand Point, N.B., writes: "I have been a great sufferer from nerve troubles. I was so weak and nervous I could not rest at night and my appetite was very poor. I tried a lot of things, but I did not get better until I had used Miller's Heart and Nerve Pills. I began to feel better and on until I had used six boxes when I felt like a different person. I can never recommend them to any woman and recommend them to all who suffer with nerve troubles."

An Unvalued Site

(London Daily Chronicle)

The news that the Bank of England is to be rebuilt draws attention to a fact which has often puzzled business men, and that is that the site on which the present buildings stand has never been valued, though it is undoubtedly the most famous in the world. What is more, the balance-sheet of the bank never includes the site and the buildings as assets, though if these were in the possession of any other company they would probably be included as worth something up to 100,000,000. But the bank's position is so secure that it can afford to neglect even such a great asset.

The Japanese government controls the supply of cork camphor.

To Further Lignite Project

Additional Grant of \$200,000 Made to Saskatchewan Briqueting Plant.

To meet the increased cost of construction of the lignite briqueting plant, an additional appropriation of \$200,000 has been made. This makes the total vote for the plant \$600,000. Of the additional vote, \$100,000 is provided by the federal government, the governments of Saskatchewan and Manitoba dividing the other \$100,000 between them. This is the same ratio as the original vote. The lignite utilization board has found it impossible to complete the project on the original grant of \$400,000. A recent estimate shows the total cost will be about \$600,000, exclusive of housing. In order to compare these prices with the original estimate of \$400,000, the board made a careful inquiry into the price of the present contemplated plant had it been erected in 1917, the date at which the original research council report was prepared. The result was a total estimate of \$490,000, which shows that the present designs are no more elaborate than were contemplated originally.

The Hon. Arthur Meighen agreed that the federal government would contribute another \$100,000 on condition that Manitoba and Saskatchewan would each contribute a further \$50,000. The question has been taken up by Mr. Meighen with the two provincial governments and so far as Saskatchewan is concerned, the additional appropriation will be met.

Roumania Wants Canadian Trade

Roumanian firms of paper users and turning to the United States and Canada for their supplies, according to announcements in this week's bulletin of the department of commerce and commerce. Other Canadian products being sought by Roumanian firms include: Leather and leather goods, including boots and shoes, harnesses, furs, fresh fish and foodstuffs, drug and chemicals and iron.

To Asthma Sufferers

Dr. J. D. Kellogg's Asthma Remedy comes like a helping hand to a sinking swimmer. It gives you life and hope and ends your trouble—something he has come to believe responsible. It is too evident to be questioned—it is his own best argument—its own best evidence.

Grovers Form Wool Pool

Michigan Farmers' Syndicate Will Market Wool for Best Prices.

Through the Michigan Farm Bureau a goodly number of the farmers of Michigan have formed a wool pool, which amounts now to 2,500,000 pounds and will shortly become a stack of 4,000,000 pounds. By an agreement with the farmer, the pool is to get a price for their wool in keeping with the prices of wool cloth and similar commodities. It is the policy of the best advice the bureau can secure that shortly the price will go up from about 22 cents per pound to 24 cents per pound. The pool is a sure thing in keeping with their anticipations when the shearing season came on.

When a flock of wool shorners now to some 10,000 individual farmers, and that number will increase to about 15,000 taken into the pool by the bureau from about 170 local assembling points where the wool is stored, sacked and shipped in car lots to Lansing.

When a farmer turns his wool in to the bureau he can secure an advance of 75 percent of its value at the time of the shearing. The farmers, however, this time, are not to be in serious need of immediate funds for very few have asked for a loan.

Farmers in other states are forming similar pools although no one in them is anywhere as extensive as this one. In New York state, for instance, the growers have small pools in 37 different counties.

Marriages Boom in Germany.

Germany is having a boom in marriages. A recent copy of the Lokal-anzeiger contains 175 matrimonial advertisements, and new fellowships and clubs, of which the object is to promote marriage, are springing up everywhere.

THERE is a Maytag Washing Machine for every home. It has a Motor, Multi-Motor, and Power Drive.

In this issue we are going to tell you all about the Maytag Washing Machine. The machine with a built-in hot water tank, air-cooled motor, and equipped with the Swinging, Revolving, Reversible agitator. It has a motor for the best washing machine in the world for use on the farm or in a town where no electricity is to be had.

We have other a hardware dealer or an electrician. We have a Maytag Washing Machine in nearly every town in Western Canada. Look over and you will find one. If you do not, write to us. We will send you a list of dealers. If you would like to see one of our Maytag Washing Machines, write to us. We will send you a list of dealers. If you would like to see one of our Maytag Washing Machines, write to us. We will send you a list of dealers.

One of the most delightful features of the Maytag Multi-Motor Washer is its simplicity. It is so simple that where anyone is it is perfectly simple. Put hot water and soap in the tub, turn the handle, and the special wringing wheel will do the rest. That is all. With a built-in hot water tank, the little Multi-Motor washer will wash and wring all the wash in your home.

Many, many homes not having electricity are today enjoying their great convenience. Perfect for the housewife's needs.

It is the only washing machine in the world with a genuine motor built right into the machine.

Readily over a light price of cleaning. It is a thorough job of cleaning in a short time.

Does away with all the hard work—saves a lot of time—and actually produces better results.

Has a power wringer. You merely feed the clothes through it. And when started for washing you can kick your chair, separator, etc., to the side. The little Multi-Motor washer will wash and wring all the wash in your home.

Does away with all the hard work—saves a lot of time—and actually produces better results. Write to us for a list of dealers.

WINNIPEG CALGARY

To Keep Meal.

During hot months buy cornmeal, Graham flour, or cereals in smaller quantities, then can in airtight glass jars, for in hot weather, glass jars are usually the best place to keep them. If you are afraid it has been visited by insects, sift and place in a hot oven in shallow dishes for a few minutes. For scorching point, then cool before bottling, to insure it from getting musty. If cornmeal does scorch a trifle it gives a pleasant parched flavor to corn bread or mush.

SAY "DIAMOND DYES"

Don't stretch or ruin your material in a dyeing. Use Diamond Dyes. Easy directions in packages.

"FREEZONE"

Lift Off Corns! No Pain!

Doesn't hurt a bit! Drop a little "Freezone" on an aching corn, in five minutes you'll have a corn-free foot. You'll lift it right off with no pain. Your druggist sells a tiny bottle of "Freezone" for a few cents, sufficient to remove all the corns, blisters, or corn between the toes, and the nail, without soreness or irritation.

Experimental Work Is Ruling Out the Risk of Farming

The appointment of Professor John Bracken of the University of Saskatchewan to the presidency of the Manitoba Agricultural College, has called attention to the invaluable research work which has been undertaken at the former institution during the last ten years on the subject of crop production. Ten years ago when Mr. Bracken came to Saskatchewan, the University consisted of a very fine site, a handful of professors and a room or two in one of the brick buildings of Saskatoon. As in the fields of agriculture and science, so in that of agriculture, everything had yet to be done.

In a recent conversation the retiring director of field experiments at the University expressed the keenest regret at leaving the work with which he has been so intimately associated and which now promises such rich returns to the Province of Saskatchewan.

Seeking the Best Crops
"Since this work has started ten years ago (said the Professor) there have been tested out over 600 different varieties of crops of over 60 different species. As a result, we are able to say definitely which of these crops are not suitable to western conditions, and which crops are. For different purposes, the best results are obtained in different ways."

"These findings are available, not only for the man who is farming, but for the University, but for every farmer in the Province, for the results have been embodied in some twenty-eight circulars published from the University on various phases of crop production. The information is also disseminated widely by the Extension Department, which is available to every farmer sent out from the College of Agriculture. By extensive correspondence too, the results are made widely known."

"The practical outcome of the work has been to determine just what crops are likely to produce the most profitable, at least in West-Central Saskatchewan—the best cereals, the best for hay, for pasture, for fodder, for silage. Previously there was only guess-work, and farmers failed to make good through ignorance of many facts which are now available. By the establishment of the available information graingrowers may now avoid many of these pitfalls which in the past have made crop raising such a hazardous business."

Crop Management

"In addition to determining what crops are best suited to the West we have endeavored to find out the best time and method for planting; the best amount to sow, and the best time and method for weeding, earthing and storing each of the crops now used by farmers. Every common crop grown in Western Canada has been planted at the University at five different times every spring in as many different plots and at different rates of seed. The results of these crops have been harvested at different times and in different ways—accurate records of the agronomic data being kept for every test. This there is now at the University an array of facts which, when summarized, constitute a valuable guide to farmers existing at the University, which may be taken as typical of the best type and climatic zone in the Province."

Plant Breeding and Selection.

It is, however, in the work of plant breeding and selection that the efforts of the department have been most pronounced. Literally hundreds of thousands of plants have been sown, and an acre of wheat has been made, in an effort to produce better yielding strains.

"We have now (continued the Professor), thanks to the indefatigable efforts of Cauters, Saville, Kirk, Henry, Harrington and others who have been associated with the work, we have now, for the first time, the farmer grows in this Province one or more varieties that during a period of from 3 to 5 years, have proved superior to anything conducted tests to anything now being grown in Saskatchewan."

"Take barley, for instance. The commonly grown sort is O.A.C. No. 21, a six-rowed variety. An introduction brought in from Sweden ('Hauchens') barley, from which we have a very promising strain called 'Surprise', has yielded 16 percent more in an average of 7 years tests than O.A.C. No. 21, which is its nearest competitor."

"It is not too much to say that the

University selections will mean, in the next ten years, an increase in wealth of many millions of dollars to the Province. The 'Hauchens' variety, now sown to barley in Saskatchewan, would result in an increase in yield each year sufficient to pay the total capital expenditure at the University since its inception. And this is only one instance among several that might be quoted."

New Crops

"The work at the University has shown that new crops are likely to play an important part in western agriculture. Kankana wheat, for instance, has been shown to be more drought and rust resistant than any other wheat, and it deserves a place in the southern parts of the Province. A new and, as yet, unnamed, crop has been found which is slightly more productive than the higher yielding heretofore used. A very productive variety of spring rye, known as 'Prosecco', has been found, while a heavy-yielding variety of flax, known as 'Crown', promises to outclass all others in productive power. "We have also a new early maturing variety of alfalfa, called 'Early White', and a heavy yielding variety of alfalfa, called 'Carlton'. In the field of fodder crops the possibilities of the summerfallow have been amply demonstrated."

"There are a new introduction of alfalfa, which has not yet been grown to any extent in the Province, but which will be made available for farmers as soon as they can be increased for distribution."

A New Seed Clover

"Several very hardy strains of alfalfa have been developed for western conditions, and one outstanding strain, called 'Arctic', has been discovered and named 'Arctic' on account of its unusual hardness and great suitability to northern conditions. It is quite possible that 'Arctic' sweet clover may prove to be a big step in making permanent our western agriculture as the summerfallow has been in building up the fertility of the eastern half of the continent."

"We have now reached the point where, on our older lands we have to speak, being drawing on our bank account without making any deposits, and we cannot keep on doing that for ever. The problem now is to develop this land; the problem now is to conserve it, and this is what our 'Arctic' of sweet clover, which is nitrogen-obtaining, quality will aid in doing."

Securing the Largest Yields.

"In studying the best methods of growing crops in different soils, or combinations of fertilizers have been applied annually at the University farm, and the effect of the different rates of seed, of sowing, of different crops. One hundred and twenty annual rotations and forty perennial rotations are being tested side by side. Summerfallow is being tilted in 16 different ways and measurement taken of the effect of each on the yield of five crops. Fruits and grass land are also managed in different ways and data on the relative yield are being taken."

Eliminating Chance.

"As a result of all this the University is in possession of facts to advise farmers how to proceed. It is the duty of the University to give one's opinion, or of advancing some theory, but of quoting actual facts. Of course no one hopes to eliminate all chance in farming, but work of this nature furnishes facts which enable men to reduce risk to the lowest point. The practical aim of the University undertakings has been the elimination of chance by the accumulation of scientific facts; thus to eliminate a safe and profitable system of farming in place of one that has been founded largely upon belief and tradition."

The Future

"In view of the work done, the next move will be to increase and distribute of the improved crops to the farmers. By way of extending the work, the University has been proposed to undertake, in a small way, the different lines of work that would have been conducted at the University, on each important soil type, in each climatic zone of the Province. In other words to place a

PROF. JOHN BRACKEN

Late of the University of Saskatchewan, was appointed to the presidency of Manitoba Agricultural College.

small edition of the University Information Leaflet in each of the 10 districts in Saskatchewan. In this way similar valuable data would be secured for every portion of the Province.

"Another plan the department of Field Husbandry had in mind was the study by co-operation experiments with hundreds of farmers in as many different parts of the Province of the best crops to grow, the best methods of growing them, and the best ways of managing the land in each particular local district."

Our Most Valuable Asset.

Even a casual visit to the University impresses one with the fact that the application of the sciences to agriculture has been accomplished in the ten years of its existence. A chat with Professor Bracken certainly confirms this, and one begins to understand the remark that the University is "the most valuable asset the Province has." What the application of the sciences to agriculture in crop production alone will mean to the Province in the immediate years it would be impossible to estimate. The wheat farmers (there should be thousands), flock there each year in order to learn the science of crop production, and for those who cannot so attend there is the extension work called the Better Farming Training each endeavoring to spread the information which the University, through its experiments, has been able to acquire.

At the beginning of this year the retiring head of the Field Husbandry department embodied the results of the crop experimental work in a book entitled, "Crop Production in Western Canada," which farmers of the West will find a veritable Bible on the subject of grain growing. It goes without saying that this work (the result of ten years of investigation work at the University of Saskatchewan), is the most authoritative text obtainable on the subject of western crops. It is the Grain-growers' Guide. Farmers will be interested to learn that in the early fall of this year the same author will put another work entitled, "Dry Farming in Western Canada."

The publication of two such works from so young a University as Saskatchewan literally "speaks volumes" for the standard of the work being done, and the Province may well be proud of its chief institution. It is pleasing to know that when the East (if Winnipeg may be taken as the center) gets its new day it gets it from Saskatchewan.

"As a result of all this the University is in possession of facts to advise farmers how to proceed. It is the duty of the University to give one's opinion, or of advancing some theory, but of quoting actual facts. Of course no one hopes to eliminate all chance in farming, but work of this nature furnishes facts which enable men to reduce risk to the lowest point. The practical aim of the University undertakings has been the elimination of chance by the accumulation of scientific facts; thus to eliminate a safe and profitable system of farming in place of one that has been founded largely upon belief and tradition."

"In view of the work done, the next move will be to increase and distribute of the improved crops to the farmers. By way of extending the work, the University has been proposed to undertake, in a small way, the different lines of work that would have been conducted at the University, on each important soil type, in each climatic zone of the Province. In other words to place a

For A Consideration

Spratt (gloomily)—I don't believe I have a friend in the world. Spenger.—You can make one; I need \$5.

Airplane engineers have been appointed for driving motorboats and pumping machinery.

A bank note printed for \$50 on one side and \$100 on the other appeared in circulation in 1890.

The Cry for Bread

Scarcity of Wheat Causes Alarm in Britain.

Every succeeding month enhances the dire probability of an approaching scarcity of wheat. Englishmen have so long enjoyed the first call on the whole world's wheat supply that many of them appear unable to realize that in peace-time it is not a law of nature that English mouths shall be filled with good white bread. At the Royal Counties show at Reading Lord Leurged upon his hearers the accumulating testimony that from this time forth our accustomed supplies of wheat from abroad will be unprocureable for an unknown time. The United States have now little more than two-thirds of their war-time wheat acreage; in the Argentine the export of wheat has been temporarily prohibited, and its future is uncertain; in Australia, a bad harvest will barely supply Australia's own needs. As for Russia, the hope of procuring grain from that broken by the Bolshevik tyrants is remote. Information is being received from Russia that large stores of grain exist in Russia; other authorities who have at least as good sources of information do not think these stores actually exist, as far as food transport is recognized the starving Russian people will make the first claim upon them, and they will, therefore, not be available for British consumption—London Times.

Living With Wolves

Strange Story In Real Life That Rival 'Tarzan of the Apes.'

In view of the success of "Tarzan of the Apes" as a film and as a novel, it is interesting to note that there have been Tarzans in real life. Not long ago there was the case of a child who was reared by monkeys. A human being was discovered near a tree having a child clinging to his hair which gave him the appearance of a monkey. It is thought that owing to this curious resemblance a troop of monkeys had adopted him as a child. When discovered this strange creature was treated as a wild animal, but on further examination vaccination marks on both arms gave convincing proof of his true origin. A curious incident befell a shooting party in India in 1884. Dr. Condon, of the Indian Civil Service, was in command. In a forest they discovered an unkempt object which they regarded as a sheep, but on close inspection, proved to be a boy walking on all fours. It was at first difficult to capture him, but after a good deal of trouble he was persuaded to follow his captors. Later it was found that he had lived in a den of wolves and ate only the raw flesh brought to him by the animal foster parents. His only European friend, Sir G. H. Colville, the ruler in the region, and his conservation, but willing guardians of the forest, were found for him and he was won back to civilization.

Must Conserve Lumber

Vital Need Is to Protect Our Present Supply.

Every form of business depends more or less upon lumber and no other material lends itself to so many uses. The beauty and comfort of our homes, the very existence of our railroads, the economical handling of manufactured goods, the benefits of a free press—the entire progress of the nation, in fact, is built upon a plentiful supply of this most necessary material. Within a century the forests of the United States have been reduced from 850,000,000 acres to 150,000,000. All persons are consuming lumber at a greater rate than before. Brightening the matter of years, while our vital need is to protect our present supply, conservation and preservation must hand—Canadian Lumberman.

Novel Chicken Food.

The extent to which the advocacy of ale can be carried by people who like it, without consideration for its real food value—or lack of value—has been recently shown in an advertisement published in 1899, on raising poultry. "In cold weather," says the writer, "a little supple of iron should always be added to the water, and a little bread, soaked in it, may be found beneficial." It is rare, indeed, that anything containing the high percentage of alcohol is recommended for any member of the animal creation. Least of all would it be recommended to be used as beneficial to chickens of course, it only says, "may be" found beneficial. If it were, breeders surely would have heard more of its favor.

If a man is both bad and worthless there isn't much hope for him.

Practical Instruction In Agriculture is Better Than Book Farming

Teaching agriculture from a text book is a remnant of the earlier method in the development of agricultural education, as tried in the public schools. In Ontario, between the years 1845 and 1889, four different text books were used. At present there is no prescribed text book in agriculture in that province. Not that the printed word as a means of enlightening the mind is ignored. But for young pupils in elementary schools, the primer in agriculture is the book that lies open in every country child's every day observation of the world around him. The book of Nature as found in the farm. The teacher of agriculture directs the learner to the book, and helps him to read it. He learns from his teacher just as a farm child in a good home, with an intelligent father and mother, learns much in agriculture and in life every day. It is a natural method of teaching and learning agriculture. It awakens an interest, it trains the powers of observation, it leads to inquiries and experiments, and the trained teacher, who is the chief guide in the intellectual development of the child uses these interests, these inquiries, these experiments as the solid ground-work for her building. She goes further in teaching agriculture than any home can.

To Conserve Helium

Canada is Only Part of British Empire Having Helium

By the award of a grant of \$50,000 to assist Professor J. C. McLennan in his investigation of the properties of helium to determine its uses for various important kinds, among them, valves, high resistances, etc., the honorary advisory council for scientific and industrial research hopes to see accomplished a method of conserving helium, which at the present is being wasted in Canada at the rate of 1,000,000 cubic feet per month. The value is estimated at not less than 10 cents per cubic foot. Most of the waste at present taking place is in gas field at the Bow river district near Calgary. In Calgary it is estimated that 12,000,000 cubic feet of helium is being lost yearly.

Canada is the only part of the British empire having helium resources and because of its peculiar heights and other properties the gas has been highly regarded and has been in great demand for the inflation of lighter-than-air craft. Now it is difficult to find other uses for it also.

The investigation now under way will involve also the liquefaction of the gas. It is understood that a large part of the cost of conserving helium of the University of Toronto is also to be available for extension of this work.

Britons Sell in Shifts

Housing Shortage Necessitates Doubling on Beds

So acute is the housing shortage in Hamilton and other parts of Lanarkshire, England, that families are using beds in double shifts. As a result labor and Socialist agitators have drawn attention to the untended condition of Hamilton Palace, the residence of the Hamilton family. There has been a popular clamor that the Duke of Hamilton should be invited to sell the historic building and its adjoining offices to relieve the home shortage.

Since the sale of the palace some months ago the rooms have been stripped of their costly paintings of art and their rich hangings and experts agree that with little expense the palace could accommodate scores of homeless families.

Colonizing Canada's Farm Lands

A steady stream of land-seekers from all parts of the United States continues to flow into the Battledore Peninsula of Central Saskatchewan, where a large area of fertile land, especially suited to dairying and general farming, awaits the settler. All speak in the highest terms of the wonderful luxuriant growth of the year throughout the district and in the early days the visitor is reminded to make that part of the country his future home, and to take part in its development.

W. N. U. 1325

larning method of teaching and natural agriculture. It awakens an interest, it trains the powers of observation, it leads to inquiries and experiments, and the trained teacher, who is the chief guide in the intellectual development of the child uses these interests, these inquiries, these experiments as the solid ground-work for her building. She goes further in teaching agriculture than any home can.

The pupil seeks the help of books, but he is not primarily dependent on books. There is created in him a taste for reading and his reading is directed intelligently. But the method doesn't make "book farming," it makes interested intelligent readers of the farm. Moreover, the book is not discarded, but given a place of honour; every country school should have its agricultural book-shelf.

Protection of Wild Fowl

Daily Bag Limits are Imposed in All Provinces

Important changes are involved in new regulations under the Migratory Birds Convention act. Daily bag limits are imposed on all provinces and there are new restrictions with regard to protection of the birds imposed throughout Canada.

In Manitoba the open season for ducks is September 1 to December 14, both inclusive, and the bag limit is 20 ducks in the aggregate. In Ontario, 40 thered in the aggregate of all kinds. Ten geese are allowed per day, 15 brant and 25 aggregate of all kinds. In Saskatchewan the limit is 25; woodcock, 10; doves, 25. The season's limit is 250 birds. Saskatchewan—Limits are 50 ducks, geese or brant, with the smaller birds the same as Manitoba. The season's limit is 250 birds, including ducks, geese or brant. Alberta sportsmen may make 30 ducks daily, 15 geese, 15 brant. The duck limit is 250 and geese 50. British Columbia's limit is 20 ducks per day, 10 geese and 15 brant. The duck limit is 250 and geese 50.

The following shooting restrictions are imposed throughout all Canada: No person shall kill, or attempt to kill any migratory game birds during the open season, except with a gun not larger than No. 10 gauge. In Manitoba the open season is to kill any migratory game birds by the use of any automatic gun or battery, or by the use of an airplane, power boat, or motor boat. No person shall kill or attempt to kill any migratory bird between the hours of 10 o'clock a.m. and 6 o'clock p.m. No person shall kill or attempt to kill from any motor vehicle or horse-drawn vehicle any migratory game bird.

There is practically no change in the regulations for species permits, but important changes are being made regarding the propagation of migratory birds, for the purpose of keeping tabs upon and controlling the propagation of migratory birds in captivity, whether to be used for food, ornamental or zoological purposes, etc.

Orgy of Extravagance

The whole world has come to London to scatter its gins and squander its money. Theaters, restaurants, and theatres are glutted with the flung surplus of the cosmopolitan Croesus. The very millions are sufficed with the shops are clogged with customers. The streets are clogged with costly traffic. You may pretend not to be interested in the display of roaring traffic of luxury. You may try to take for granted the Niagara of pleasure. But never in our time has there been so much of it. Extravagance has never been so ruthlessly—London Express.

Valuable Alfalfa Yield.

J. E. Strong, who raised eleven acres of alfalfa seed on his irrigated farm north of Brooks last year, has tested a statement as to his earnings having disposed of all his seed. His gross return was \$6,543 of the field, or \$594.83 per acre. He produced 7,700 pounds, which sold at 85 cents a pound. This is considered the greatest financial return per acre of any farm in the west.

Ten to one it's your own fault if

luck is against you.

C. O. CARLSON

The Sharrow ladies are holding their postponed garden party to-morrow evening.

Dr. MacCharles is expecting to move into his new residence in the course of a few days.

Water in the Saskatchewan river is reported to be lowering rapidly.

Mrs. Howard, of Acadia Valley, is visiting her sister-in-law, Mrs. G. Durk.

Miss Harrison and Miss Sauter, of Fairlight Sask., are the guests of Mr. and Mrs. R. L. Arthur.

Miss Etta Long, of Majorville, Alberta, spent two weeks with her cousin, Miss Vera Rusaw, recently.

Alex. Milne, left this morning for Blandish; he is expecting to take charge of an elevator at Dendhart, Alta., in the course of the next month.

Mr. and Mrs. R. E. Gray and family returned from their vacation last week.

Nominations for the councilorship, made vacant by the resignation of D. McEachern, will be received at the municipal office on Monday.

Welland Henderson, whose illness has now been diagnosed as curvature of the spine, will be confined to his home for the next six or eight months as a consequence of this ailment.

R. L. Arthur is to be complimented on the changes he has had made in his butcher shop. These extensive changes are a testimony of the faith which Mr. Arthur has in the future of our town.

It is reported that a number of farmers in the Acadia Valley district, suffered crop damage from hail on Monday evening. The storm could be seen from this side of the river, and although it looked at one time as if we would be favored with a visit, it finally passed off to the eastward.

NOTICE

IN THE ESTATE of Philip Stenham, late of the Village of Vandyke, in the Province of Alberta, Farmer, deceased.

NOTICE is hereby given that all persons having claims upon the above-named Philip Stenham, who died on the 5th day of June, 1920, are required to file with the Official Guardian, Government Buildings, Edmonton, by the 27th day of September, 1920, a full statement duly verified, of their claims and of any securities held by them, and after that date the Administrator will distribute the assets of the deceased among the parties entitled thereto, having regard only to the claims of which notice has been so filed, or which have been brought to his knowledge.

Dated this 12th day of July, 1920.

Chesterfield Picnic tomorrow. Buffalo announces a picnic for Friday next, August 6.

Mr. and Mrs. J. N. Anderson, left Saturday, on a trip to Rochester, Minn.

Miss Opal Boyd, is extending her visit to Winnipeg, by a trip to the home of her father's parents at Owen Sound, Ont.

Tri-Weekly Local Passenger Service, West

A meeting in connection with a proposed change of railway service to be instituted on the west end of the Empress line, took place on Friday last at Social Plains. Supt. McArthur of the C.P.R. Medicine Hat Division, and J. H. Shimnick, of the Railway Commission, were present. The outcome of a general discussion was that Supt. McArthur, would endeavor to have his Company put on a tri-weekly local passenger service. Although the matter of time was left in the hands of Mr. McArthur, it was generally understood that the train would leave Empress about 10 a.m., arriving at Calgary, about 8 p.m. This would include a stop at Bassano for supper. The train would leave Calgary at 12 noon the next day, arriving in Empress about 10 p.m. It was thought these times would allow for the conduct of the business of the travelling public. It is expected that this change of train service will take place somewhere near October 1.

"A spin in the country! The hamper full of good things to eat, the tank full of Imperial Premium gasoline and the crankcase filled with Imperial Polarine. Nothing can mar the day's pleasure."

Thorough Lubrication

IMPERIAL Polarine can be depended on to give you thorough lubrication, to keep the engine running quietly and faultlessly, to take you a 100 miles or 1,000 miles at the least cost for fuel, oil and repairs.

Imperial Polarine forms a piston-to-cylinder seal that maintains compression and utilizes the full power of the fuel. It spreads a thin, yet unbreakable oil film over every friction surface that minimizes wear—it is the perfect lubricant.

Imperial Polarine will not break up under high operating heats. It burns freely with hardly a trace of carbon. Costs less because it saves depreciation and fuel. Sold in gallon and four-gallon sealed cans, half-barrels and barrels, also 12½-gallon steel kegs, by dealers everywhere.

Look for the Imperial Polarine Chart of Recommendations when you buy oil. It shows which of the three grades described below is recommended for your car. Use the grades specified, exclusively.

IMPERIAL POLARINE (Light medium body) IMPERIAL POLARINE HEAVY (Medium heavy body) IMPERIAL POLARINE A (Extra heavy body)
